Deloitte Cyber Awareness Training

Protect your organisation against cyber crime through education

We are all under constant attack by cyber criminals

Phishing mails, ransomware, spyware, hacking and data theft have become common elements of our everyday lives and something that we need to be aware of. And although we are in control of hardware- and software-based IT security solutions, the main risk is still the actions of our digital workforces.

This is why we offer a training programme that will provide the users with knowledge about information security in order for them to actively help protect your organisation against cyber crime.

The training programme can also be an efficient tool for your organisation related to European General Data Protection Regulation (GDPR) as related materials can be included.

We make cyber awareness easily accessible

Deloitte's Cyber Awareness Training consists of an online learning platform granting you access to a number of courses on information security. This allows you to combine your training to match your needs. You can also decide when the individual courses should be launched. The topics include social engineering, mobile devices, phishing mails, CEO fraud, ransomware, safe surfing, passwords, social media and the GDPR, among others.

Simple, efficient and motivating

Every course is made up of an explanatory video lasting 3-5 minutes followed by a test. Every course is expected to take no more than 10 minutes to complete. The user can take the course whenever it fits into their schedule, and they will have access to the awareness portal from their computers and smartphones. Every time the users complete a course, they will receive a diploma. The diploma serves to document their newly acquired knowledge about IT security.

Development

The IT security threat picture is constantly evolving. This is why we keep adjusting the Cyber Awareness Training through new courses, videos and tests to keep the users up-to-date.

Multiple languages

Deloitte's Cyber Awareness Training is available in 18 languages.

Data Management **Phishing Mails** In the office **Passwords**
Social media **Social Engineering** Security on the internet **Ransomware**
GDPR **Fake news** When travelling **Security of mobile devices**

The human factor

Over 90 % of cyber incidents are caused by a human action. Research shows that companies should be more attentive to the cyber security hygiene of their employees. Education is a cost effective way to lower your risk of a cyber incident.

Customised branding

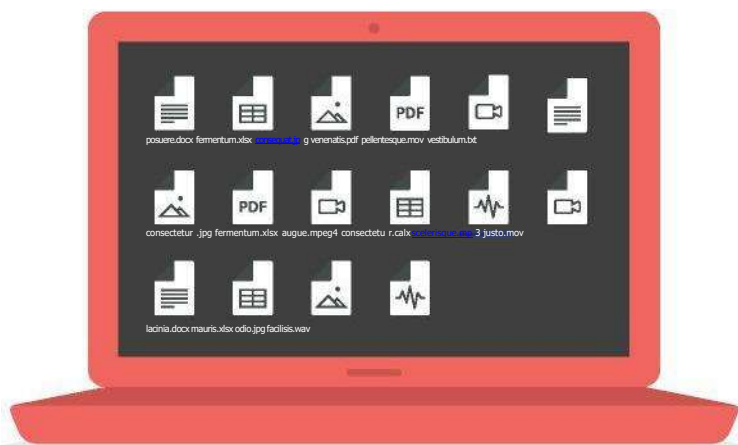

It is possible to customise the Deloitte Cyber Awareness Training using your own logo and branding. Elements such as content and tests can also be adjusted to fit your organisational needs and preferences.

For you as an administrator

As an administrator, you have access to an intuitive administration module. This makes it easy to set course dates, administer users and view user statistics. In order to make it as easy as possible to administer the portal, we offer Microsoft Active Directory (AD) integration and Single Sign-On (SSO) with SAML 2.0.

For organisations with their own LMS

If your organisation has its own Learning Management System (LMS), we offer courses in a SCORM format.

Free trial

Experience how simple, efficient and informative cyber awareness training can be. Contact us for a demo account.

“We know that one day we will be hit.”

Niels Smedegaard, president and CEO of DFDS, believes that the most important tool for avoiding cyberattacks is regularly training of your employees.
